

Remanufactured Lift Truck Parts

Remanufactured Forklift Part - Lift trucks are rather costly pieces of machinery as a new electric lift truck unit could cost starting from eighteen thousand to twenty five thousand, for a five thousand pound equipment. Moreover, some thousands of dollars would have to be invested in a battery charger and battery. The same internal combustion lift truck of the same lift capacity would cost slightly less and the diesel units which are capable of heavier lifting capacities can cost upwards of one hundred thousand dollars. Reconditioned forklifts are an alternative so as to save much cash in view of the fact that they cost less than half the price of new units.

Several individuals think they would deal with more maintenance issues if they obtain a reconditioned lift truck and are leery of obtaining a used forklift at a sale price. A properly reconditioned forklift will work just as well as a new one and any fears of repairs are unfounded. Even if your lift would get heavy use, so long as you take proper care of the machinery, it would serve all your needs and possibly save you a lot of cash.

When thinking about acquiring a used forklift, it is important to ascertain what the seller means by the term reconditioned or refurbished. Many companies do an excellent job of entirely making over the unit prior to reselling it. This consists of disassembling the forklift, rebuilding the engine, sandblasting the lift and next reassembling everything and finishing with a fresh coat of paint.

To meticulously reconstruct a forklift engine, a good business will initially absolutely disassemble it. A heat cleaning system is then utilized to clean all of the parts. As soon as this step has been finished, all of the components are checked to see if they have any extensive wear, any defects or breakage. Certain parts like for example cylinder heads, crankshafts, cylinder blocks and connecting rods are reground, resurfaced and resized if needed. Several components like bolts, gears, nuts etc. are repaired or replaced as needed.

The engine is rebuilt manually once the overhaul has been finished. After putting it back together, a series of tests are applied to the running machinery. This is done to be able to check all of the components to guarantee there are no problems or leaks. If any problems occur, the necessary modifications are made.

There is no reason to be concerned about purchasing reconditioned lift trucks from quality sellers. The process the machines go through to be rebuilt ensures the utmost reliability. Upkeep costs could really work out to be less because you will avoid the initial phase of higher maintenance projections that a new lift truck has as it is broken in. By following routine maintenance schedules and taking care of the equipment correctly, a reconditioned lift truck will serve you well.
