

Carriage Rollers

Carriage Rollers - Carriage rollers are particularly designed bearings that are utilized on lift masts to be able to help them function within tough environmental surroundings. Lift masts are often subjected to shocks, oscillations, high dynamic and vibrations and static loads. This apparatus is regularly exposed to environmental influences like for example cold, heat, dust, contamination, aggressive ambient air and moisture. Thus, the lift masts' guidance arrangements have to be specifically tough and have a specific high load carrying capacity.

To help compete in lots of different environmental surroundings, carriage rollers were designed for many lift masts. While having the ability to handle a particularly high load carrying capacity, these bearings provided a cost-effective operational security for the guidance arrangement of the lift masts.
